

WNYRIC DEP - District Setup Instructions

The Device Enrollment Program (DEP) simplifies the setup by automating mobile device management (MDM) enrollment and supervision of devices during device activation. Information on the DEP can be found here: <https://www.apple.com/education/it/dep/>

For any further information you can contact: Scott Przywara at sprzywara@e1b.org or 716-821-7090

WNYRIC will enroll only BOCES owned devices. We will need the devices you want enrolled in the DEP sent in a csv file conforming to the template shown below to sprzywara@e1b.org (please enter a subject line of: "district name" - DEP). We will enroll those devices into the MDM Server setup in the DEP to allow you to manage them from the District's MDM. The devices you want to manage through the DEP will need to go through activation to enroll (*note: Activated devices will require a Reset of the device by Erase All Content and Settings*).

Serial Numbers
listed in
Column A

	A	B	C	D	E
1	AAAY7YU2272				
2	SUHHJ78728				
3					
4					
5					
6					
7					
8					
9					
10					
11					

If you send the serial numbers for all BOCES owned devices; both the Shared Cart (note: still best practice = Apple Configurator supervised) and the one-to-one, you will need to create two profiles for DEP devices. You will need to create a profile in the MDM to supervise the devices that are deployed one-to-one in your district. You will also need to create a profile in the MDM to prevent supervision on the devices that are in shared carts and still supervised through Apple Configurator. You will need to assign these profiles separately to each individual device.

We will follow the process below to setup the DEP for your BOCES owned devices.

1. District needs to indicate the MDM they are utilizing, and send the *.pem certificate to E1B
2. E1B will create a MDM Server in the DEP for the district with the *.pem file
3. E1B will send the downloaded *.p7m cert file from the DEP to the district for them to upload into their MDM
4. The district will send the serial numbers they want in the DEP to E1B (note: csv files in the template form shown above will only be accepted)
5. E1B will put the serial numbers into the DEP for the district
6. Activated devices will show up in the district's MDM for management

We would like to work with you through this process. Please contact me to test with a few devices before you plan to fully implement this with all of your devices. Thank you.
